

Certificate of Analysis

Strain C57BL/6 Mouse Mesenchymal Stem Cells

Catalog No. MUBMX-01001 Lot Number: 140620J31

Cryopreservation Date: 2014-06-20 Passage Number: 6

Viability

Cells are assayed for viability post-thaw using vital staining assay with trypan blue. Specification: Cells should exhibit $\ge 80\%$ viability.

Sterility

Bacterial and Fungal Contamination: Samples are inoculated and cultured in blood agar plate, thioglycolate broth, tryptocase soy broth and sabouraud dextrose agar. Specification: No growth must be observed.

Mycoplasma: Samples are tested for mycoplasma contamination using a PCR-based assay and direct culture.

Specification: Results must be negative.

Endotoxin: Samples are tested for endotoxin contamination with LAL test. Specification: Results must show ≤ 25 EU/ml.

Purity

Cells are assayed for purity using flow cytometric analysis of cell surface antigen expression after cryopreservation. Cells are immunofluorescently stained with fluorochrome-conjugated antibodies specific to cell surface antigens CD29, CD31, CD44, CD117 and Sca 1. Specification: Cells must show \geq 70% positivity for expression of cell surface antigens CD29, CD44 and Sca-1. Cells must show \leq 5% positivity for expression of cell surface antigens CD31 and CD117.

Proliferation Ability

Cells are characterized by their ability to proliferate in culture with an attached well-spread morphology for \geq 5 passages, and \leq 5% cells exhibit spontaneous differentiation in each passage.

Differentiation Ability

Cells are assayed after cryopreservation for their ability of tri-lineage differentiation. Cells must be able to differentiate to osteocytes, adipocytes and chondrocytes when cultured in the appropriate differentiation media.

Results:

All specifications have been met.
